Summary

I have 9-year experience in working in industry and 7 years doing research in academia. I am good in Mathematics and in Programming. I am enthusiasm, quick learner, hard working, and responsible.

Education

Ph.D. in Computer Science, NTNU, Norway	Mar 2017 - Jun 2020 (expected)
M.Sc. in Computer Science, Hunan University, China	Sep 2014 - Nov 2016
B.S. in Computer Science, Hanoi University of Technology, Vietnam	Sep 1999 - Jun 2004

Work Experience

Research Fellow, NTNU, Norway

2017 – Present

– I am working in the MUSED (MUlti-Source Event Detection) project at NTNU. The project handles big data streams in a wide-range of applications, e.g. classification, change detection, fraud detection, network attack, and genetics applications. I developed novel techniques and efficient algorithms for detecting events in various type of data. The outcome of my work is summarized as follows:

1. I optimize the memory usage, and propose a novel structure to avoid costly joins in mining high profit product groups. My method is 6 times lesser memory consumption, and 10 times faster than the state-of-the-art methods.
2. Utilize the temporal dependence of data, and propose novel algorithms for change detection. I propose auto-tuning learning models by projecting vector on a ℓ_1 space. My method is the first rank among the compared methods.
3. We investigate the correlation between features of data in user activity behavior analysis in social networks with concept drift. We propose an evolving model that automatically updates its coefficients. Our proposed method is 3.99% more accurate in classification task, and the error rate is 12 times better than the state-of-the-art methods with concept drift.
4. We work with tensor, which is a core structure in most of the current machine learning library. We develop theoretical proofs for multiple dense subtensor detection with guarantee on the density. We propose a new technique to detect multiple dense subtensors with a higher lower bound density guarantee. Our method is more than two million times accurate on density and 6.9 times faster.
5. We propose novel proofs to provide a better guarantee for the dense subgraph and subtensor detection problem which have been utilized in tremendous works and applications such as fraud detection,

event detection, and genetics applications. Experiments show the efficiency and our method can guarantee the density more 70% than the state-of-the-art method.

– Programming Languages: Java, C++, MatLab, Python.

CSC Master in Computer Science, Hunan University, China

2014 – 2016

– Score 91.94/100, excellent. Taken courses are Algorithm Analysis and Design, Discrete Mathematics, Intelligent Optimization Algorithm, Advanced Artificial Intelligence, Program Language, Advanced Computer Organization, Advanced Data structure and Algorithm.

– Propose a novel coverage concept, and develop a method for quickly raising the lower bound value to prune the search space. We develop new efficient algorithm for mining top-k high utility itemsets, our proposed algorithm outperforms the state-of-the-art methods (*Knowledge-Based System, Elsevier*).

Industry Working Experience

Senior Software Engineer, MB Bank, Vietnam.

2013 – 2014

– Develop enterprise applications (HR) and business processing management (BPM) (appraisal process, loan process) using software-AG product, service monitoring tool. Advising and fixing some vulnerabilities and flaws of applications and systems.

– Platform & Techniques: Web-Based Application & Services. Software-AG, SQL-Server, PHP, C-Sharp.

Solution Architect, Team Leader, VTCMobile, Vietnam.

2011 – 2013

– Build Back-End framework and services for applications and games on mobile platform. Analyze and design databases and develop backends, restful services, C-Sharp, SQL-Server, NoSQL-MongoDB, OAuth.

Researcher, CDIT, Vietnam.

2006 – 2011

– Designed solutions and developed applications for Vietnam Post, used in all post offices: Telecommunications service management, money transfer service management, parcel and package management, auto-update application.

– Platform & Techniques: Window & Web Based Applications. VB.Net, C-Sharp, SQL-Server, Oracle.

At the same time, I held the position as outsource software engineer for Vingroup, Vietnam.

– Built HR system, Booking online, Member Management System, Real Estate Management.

– Platform: Window & Web Based Applications, C#, DevExpress, SQL-Server.

Developer, Vinacomm, Vietnam (VCCorp).

2004 – 2006

– Build content management system for news and financial (stock) service system. Build indicator, candle, pattern recognition and rebuild system with new technology, C-Sharp, NoSQL-Redis.

Honors and Awards

- | | |
|--|-------------|
| 1. National award in Mathematics for high school student | 1999 |
| 2. Full CSC Scholarship for Master degree | 2014 – 2016 |
| 3. Selected for Best Papers of the Industrial Conference on Data Mining Conference | 2016 |
| 4. PhD Fellowship | 2017–2021 |
| 5. SIGIR Student Travel Grant | 2019 |

Research Interest

Data Mining, Algorithm Analysis, Optimization, Tensor and Graph.

Machine Learning and Artificial Intelligent.
